

IN THE SPECIFICATION:

Revise Page 3, Lines 6-10 to read as follows:

--An object of the present invention is to provide an arrangement of the type defined in the preamble of claim 1 herein having a higher efficiency discussed above than such arrangements already known.--;

Revise Lines 30-35 to read as follows:

--Another object of the present invention is to provide an arrangement of the type defined in the preamble of appended claim 2 herein reducing the risks of applying torsional stress to a rod clamped by said first clamping means with respect to the arrangement according to the US patent mentioned above.--;

Page 6, revise Lines 15-30 to read as follows:

--The invention also relates to methods of clamping a thin rod according to the appended independent method claims. The advantages of such methods and the embodiments thereof according to the appended dependent method claims appear without any doubt from the above discussion of the preferred embodiments of the arrangement according to the present invention.

The invention also relates to a computer program and a computer readable medium according to the corresponding appended claims. It is easily understood that the methods according to the invention defined in the appended set of method claims herein are well suited to be carried out through instructions from a processor that may be influenced by a computer program provided with the program steps in question.--
